## Het BIQE netwerk is:

Het meest snelle, flexibele en efficiënte intranetwerk  
Dit intranetwerk gebruikt de threads van alle aangesloten pc's en servers.

### Voorbeeld

14 pc's met 16 threads;

10 pc's met 32 threads;

1 server met 56 threads;

1 server met 32 threads

-----  
processnelheid 632 threads

Hoe meer pc's hoe meer snelheid

ontzorgen van import tot export

## BIQE netwerk in vier stappen

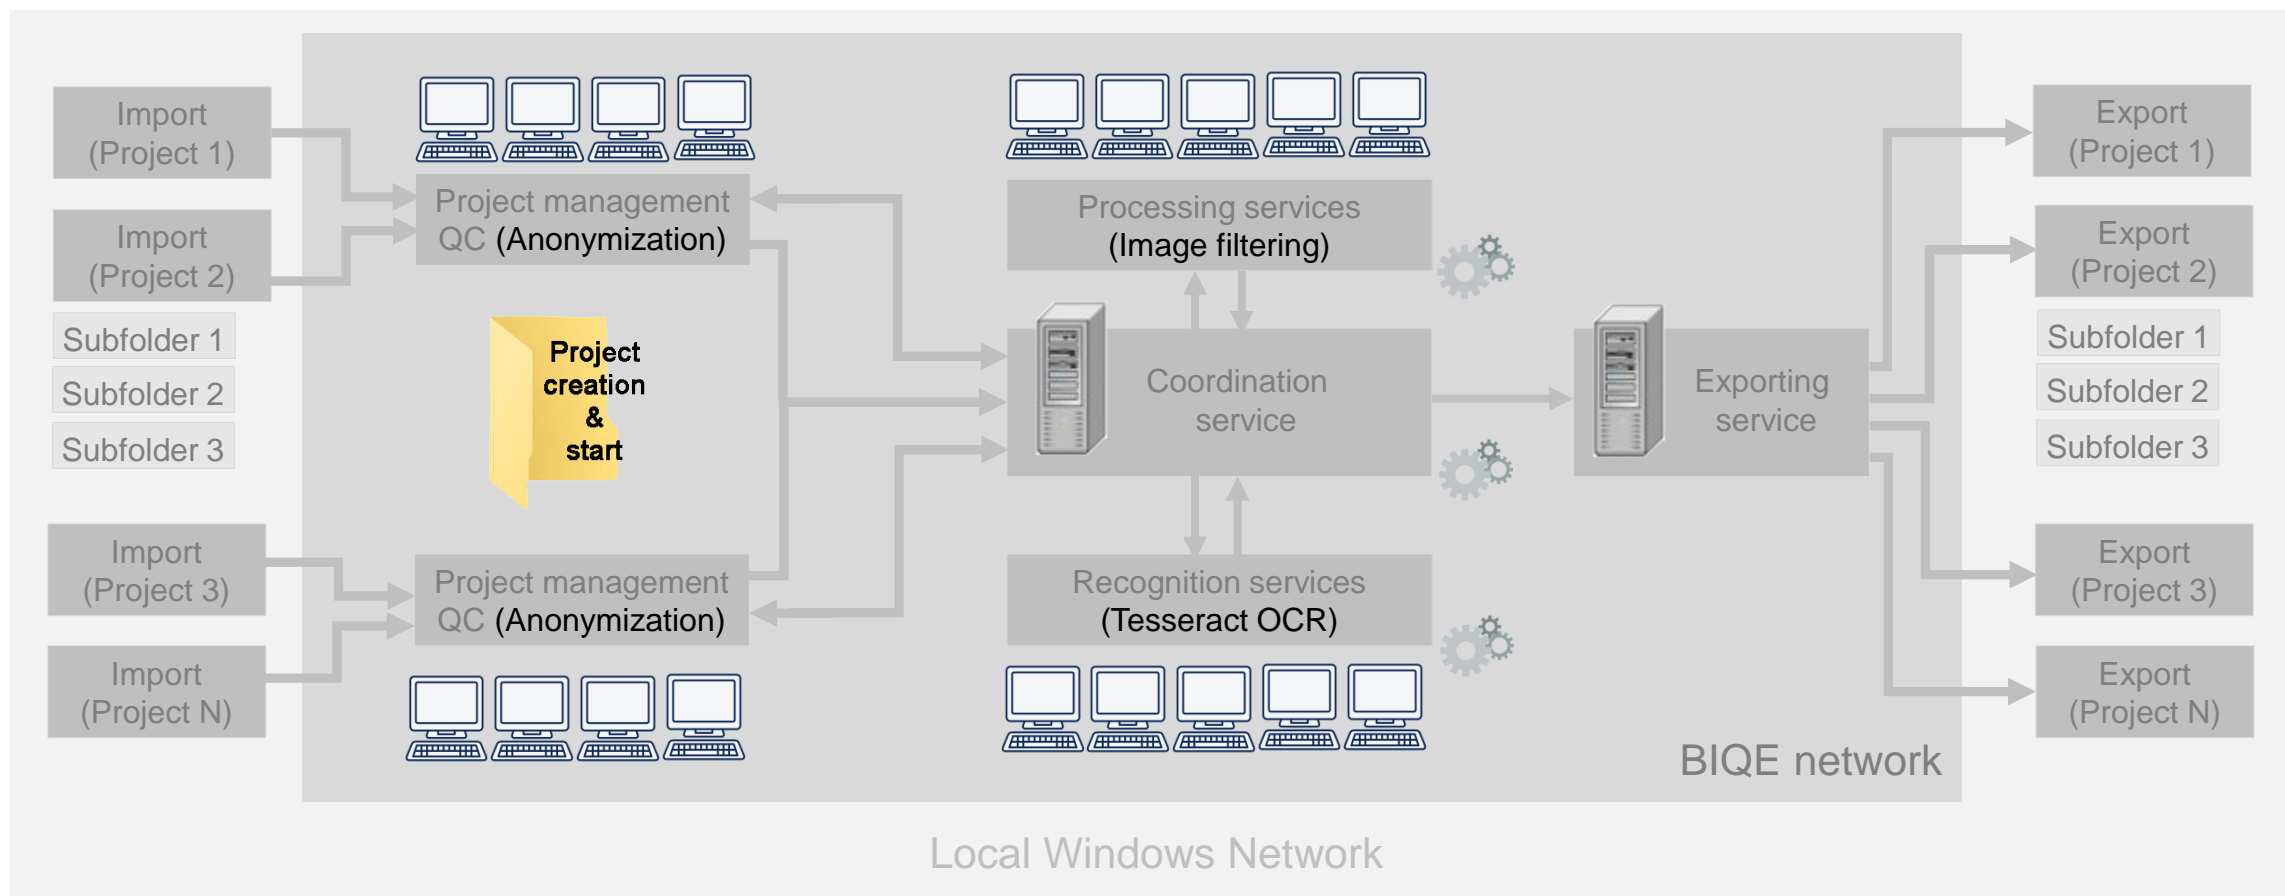

1. filteroptimalisatie
2. tekstherkenning
3. anonimisering (nacorrectie 1 op 1)
4. exporteren

ontzorgen van import tot export

1. Page with automatically found text for anonymization
2. Switching to anonymization mode button
3. Anonymized text
4. PDF text layer visualized over the scan

The screenshot shows the BIQE software interface. On the left is a gallery of document pages, each with a small thumbnail and a unique ID (e.g., 00000001). A red box highlights one of the thumbnails, and a red arrow points from it to the main view. In the main view, a document page is displayed with a green rectangular overlay containing text. Red boxes highlight specific text elements within this overlay. A red arrow points from the gallery to the main view. A green arrow points from the top of the main view to the top of the gallery. The interface includes a top menu with 'Projects', 'Filters', 'Actions', and 'Processing'. A 'Filters' panel on the right shows 'Original image'. The bottom status bar indicates 'Loaded 27 of 49'.
